## EDUCATION

**California State University, Fullerton**

Expected December 2025

Master of Science - Computer Science

**University of California, Irvine**

June 2017

Bachelor of Science - Applied Mathematics

## SKILLS

**Languages:** C# | CSS | HTML | JavaScript | Python | SQL | Visual Basic (VBA)

**Frameworks/Libraries:** .NET | Bootstrap | Django | Entity Framework | Express | React

**Additional Tools:** BeautifulSoup | Excel | Figma | Git/Github | Jira | Node.js | Photoshop | Redis

## EXPERIENCE

**Paramount+ (3-Time Return Offer)**

Summer 2023, 2024, 2025

*Software Engineering Intern*

*Remote*

- Built RESTful API endpoints using C#, .NET 8, Entity Framework for tracking newsletter engagement.
- Collaborated with frontend engineers to integrate a search feature, integrating React interfaces with backend logic.
- Migrated legacy ASP.NET Web Forms to .NET Core APIs, improving performance, reducing maintenance overhead, & cutting infrastructure costs via Linux-based deployments.
- Wrote unit tests using the Arrange-Act-Assert pattern to improve coverage & ensure data integrity during refactors.
- Developed a Python/BeautifulSoup web scraper to expand school coverage across MaxPreps' national database.
- Participated in Agile team rituals (standups, sprints), gaining exposure to product lifecycles & CI/CD pipelines.

**VCI Construction, LLC**

10/2021 – 06/2024

*IT Data Specialist*

*Anaheim, CA*

- Automated generation of 20 Excel workbooks with 10+ sheets each for 6000+ permits using Visual Basic.
- Implemented robust error handlings to prevent crashes & ensure reliability in workbook macros.
- Managed & optimized an internal database management tool for tracking & updating permit statuses, by incorporating advanced formulas, data validation, & macros to improve functionality & reduce manual errors.
- Streamlined GIS workflows by automating 3GIS map updates, reducing processing time by 50%.

**Revel Energy, LLC**

07/2018 — 02/2021

*Energy Analyst*

*Irvine, CA*

- Automated proposal generation using Visual Basic (Macros), reducing development time by over 50%.
- Analyzed 35,000+ data points from XML/CSV to tailor renewable energy designs for commercial clients.
- Collaborated on preliminary system layouts using SketchUp & AutoCAD, adhering to California Fire Code.

## PROJECTS

**The Golden Boot** — [Github](#) — Bootstrap | CSS | Express | HTML | Node.js | JavaScript | React | Redis | Vercel

- Developed a responsive full-stack application designed to handle live soccer information.
- Utilized RESTful API endpoints using Express to fetch & serve soccer data from an external football-data API.
- Implemented Redis caching to reduce API calls & improve app performance under load.

**Nonprofit Financial Predictor** — [Github](#) — CSS | Django | HTML | JavaScript | MongoDB | Pandas | Python

- Developed a full stack application for comprehensive nonprofit financial analysis, integrating data acquisition, machine learning predictions, & comparative visualizations.
- Utilized MongoDB to manage & structure a scalable & flexible database, accommodating organizational profiles & a decade of financial filings.
