SUMMARY

Full-stack and backend software engineer with production experience building secure REST APIs, data pipelines, and end-to-end features in C#, .NET, Python, and React. Proven track record at Paramount+ shipping production systems across the full SDLC. Strong foundation in software engineering fundamentals, testing, and cross-functional Agile collaboration.

EDUCATION

M.S. Computer Science | *California State University, Fullerton* **Dec 2025**

B.S. Applied Mathematics | *University of California, Irvine* **Jun 2017**

CERTIFICATIONS

AWS Certified Cloud Practitioner **Jun 2026**

Google Project Management Professional Certificate **May 2025**

EXPERIENCE

Agile QA Engineer | *TribalScale* **03/2026 – Present | Remote**

- Collaborated with product owners, developers, and scrum teams to define acceptance criteria and test strategies aligned with sprint goals; validated Cable Television (CTV) application behavior across smart TV platforms.
- Executed regression and API test suites validating content delivery, Digital Rights Management (DRM) integrations, ad services, and playback quality, including buffering, latency, and adaptive bitrate behavior across varied network conditions.
- Identified, documented, and prioritized defects in Jira, partnering with developers to drive timely resolution within sprint cycles and maintain release quality.

Software Engineering Intern | *Paramount+* **Summer 2023, 2024, 2025 | Remote**

- Built and maintained secure, production-grade REST APIs in C# (.NET 8) using Entity Framework, support internal analytics and user engagement platforms serving millions of subscribers.
- Delivered end-to-end full-stack features – including search, redirect logic, and authentication – balancing product requirements with technical constraints across the full SDLC.
- Designed and implemented unit and frontend test suites (C#, Jest, React Testing Library), improving deployment confidence and reducing release regressions.
- Refactored legacy JavaScript codebase to TypeScript, improving long-term maintainability and type safety across the team's shared codebase.
- Debugged and resolved production issues in backend and frontend systems, identifying root causes and implementing durable fixes.
- Collaborated closely with PMs, designers, and engineers in Agile sprints across all phases of product development.

IT Data Specialist | *VCI Construction* **10/2021 – 06/2024 | Anaheim, CA**

- Developed VBA-driven automation for daily Excel workbook generation, fully eliminating manual effort and cutting report turnaround time by over 50%.
- Redesigned and optimized an internal data management platform, integrating validation rules, error handling, and complex formulas to improve system reliability and cut data-entry errors by 70%.
- Engineered automated 3GIS update pipelines, enhancing data integrity to 95% & reducing processing time by 50%

Data Analyst | *Revel Energy* **07/2018 – 02/2021 | Irvine, CA**

- Automated proposal generation using Visual Basic (Macros), reducing development time by over 50%.
- Analyzed 35,000+ data points from XML/CSV to tailor renewable energy designs for commercial clients.

PROJECTS

The Golden Boot — [GitHub](#) — React | Node.js | Express | Redis | JavaScript | Vercel

- Full-stack app delivering real-time soccer statistics via external APIs; implemented Redis caching to improve performance under load.
- Built RESTful backend services for data ingestion, transformation, and aggregation with reusable, data-focused frontend components.

Premier League Referee Analysis — [GitHub](#) — Python | Scikit-learn | Pandas | Streamlit

- Analyzed 15 seasons of Premier League match data using logistic regression, random forest, gradient boosting, SVM, and KNN to explore referee behavior and match outcome predictions.
- Conducted evidence-based feature analysis examining card distribution across player demographics, deployed interactive Streamlit app for model exploration.

Nonprofit Financial Predictor — [GitHub](#) — Python | Django | MongoDB | Pandas

- Built a data-driven analytics platform enabling nonprofits to forecast financial health from 10+ years of IRS filings, applying ML techniques to generate predictive dashboards.

SKILLS

Languages: C#, Python, JavaScript, TypeScript, SQL, HTML, CSS, VBA

Frameworks/Libraries: .NET, React, Express, Entity Framework, Django, Scikit-learn, Pandas

Tools & Platforms: AWS, Git/GitHub, Redis, MongoDB, Node.js, Jest, Figma, Jira, Confluence, TestRails

Concepts: Object-Oriented Design, REST APIs, Agile/SDLC, Unit Testing, Machine Learning, Data Pipelines, Secure & Scalable Systems
